## Table de codage " Conclusion sérodiagnostic rubéole "

| CODE | Interprétation des résultats                                                                                                                      |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| RAS  | Absence d'anticorps. Absence d'immunité.                                                                                                          |
| STA  | Titre stable d'anticorps. Sérologie à interpréter en fonction du contexte clinique et biologique.                                                 |
| SCV  | Séroconversion. Primo-infection rubéolique probable. Sérologie à confirmer en pratiquant une recherche d'IgM spécifiques.                         |
| AUG  | Augmentation du titre des anticorps. Sérologie à interpréter en fonction du contexte clinique et du résultat de la recherche des IgM spécifiques. |
